

SUMMER PROGRAM 2010
FOR STUDENTS ENTERING PS-FOURTH GRADE

ADVENTURES IN THE CASTLE

SESSION 1: JUNE 7 – JULY 2, 2010

Welcome to the adventures of knights and ladies. We will take you back into time and revisit the tales of the royal castle. We will be making new friends, sharing ideas, and working together as we enter the Navy Hale Keiki Castle. The children will be learning about life in a castle, choosing activities from various learning centers, which will allow for a hands-on approach to learning skills, and creating various art activities as directed by the teacher. The children will have an opportunity to develop respect for self, others, and the environment, adjust to new situations, cooperate by working together, and problem solve.

INVENTORS AND SCIENTISTS

SESSION 2: JULY 6 – JULY 23, 2010

Have you ever wondered why? In the second session, we will be exploring different ways of making things move by land, sea, and air. We will explore the history behind inventions and learn about famous inventors and how these inventions have made our lives fun, interesting, and useful. We will also reinforce the idea that a career as a scientist is an attainable goal for anyone. An in-house summer field trip will be scheduled for this session.

Welcome aboard for a summer of fun!
